

# Blaser CDP – Best Effects with Lead

As a result of the controlled deformation process (CDP) the CDP projectile ensures a powerful shock effect and high penetration force while its weight remains virtually the same.

Despite its relatively low weight, the CDP bullet produces the optimum exit wound while causing minimum meat damage. Upon impact, the CDP bullet mushrooms symmetrically in four directions. Regardless of varying velocity and target resistance, the deformation process always remains controlled. When mushrooming, the diameter of the bullet increases by 2.5 times. This effect has been achieved by accurately calculating the behaviour of the bullet components during the shot.

### Extensive testing over hundreds of shots in the field showed the following results:

- in 78% of cases, the quarry ran less than 20m following a hit
- in 94% of cases, very low meat damage was reported.
